

RAKSA BOTTLE WATER TRAP

EN 274

6582601 PLAST. WATER TRAP 32mm
 6582616 PLAST. WATER TRAP 32mm WITH FLEXI PIPE
 6582611 PLAST. WATER TRAP 32mm COMPACT WITH FLOOR PIPE

Intended Use

- The purpose of the RAKSA water trap is to lead greywaters in to the sewage system and form a stench trap to prevent sewage odours from entering the room air.

Product

RAKSA water traps have been manufactured in Finland since 1995 and we have been issued a Key Flag certificate for the products.

The RAKSA water trap is a Finnish product and its product properties are developed together with customers. If necessary, we have altered the parts as needs and requirements change.

The SS base sieve (8) for the sink is installed with a SS M6 screw, to the SS nut on the slide extension (5). This installation method allows the joint to be opened and closed several times, e.g. in case of cleaning.

The parts that are equipped with cone seals tighten in to a stiff and sealed entity which can withstand slight touches and temperature fluctuations without leaking. Cleaning is also successful as the SS nut and screw can withstand several openings.

Package

The 32mm Water trap is preassembled in a zipper bag with all the required accessories:

- SS sieve (AISI304)
- Rubber plug, with brass triangle
- Cellular plastic seal
- Moulded seal
- SS screw m6x70
- Outlet pipe's flange cover
- Depending on the product, floor pipe (32x680x210), flexi pipe or wall pipe

Production

Manufactured in accordance with the EN274-1 standard

The product is type-approved:
 STF - VVT VTT-RTH-00107-14
 RISE - SC0625/17
